DIN BS4504 En1092-1 Forged Steel Flange UNI Screw Flange With NPT BSPT

Basic Information

Place of Origin: CHINABrand Name: DEYE

Certification: ISO9001:2015 PED
 Model Number: PF-FL-TH11
 Minimum Order Quantity: 10PCS

Price: USD10-USD100 each pcs
 Packaging Details: Fumigation Ply-wooden cases
 Delivery Time: 30 days for usual order

Payment Terms: T/T, L/C, D/P

Product Specification

• Standard: ASME B16.5, ASME B16.47, API 6A, EN

1092-1, BS 4504, BS 10, DIN, JIS, GOST.

Material: A105, A105N, A350LF2, A182F22, F11, F56,

F60, Stainless Steel

• Size: 1/2"(DN15)-88"(DN2200)

• Types: Weld Neck, Slip On, Blind, Socket Weld,

Threaded, Lap Joint, Spectacle, Paddle, Long Weld Neck, Spacer, Orifice, Reduced,

Plate

• Pressure Rating: Class 150, 300, 400, 600, 900, 1500, 2500;

PN 6, PN 10, PN 16, PN 25, PN 40, PN 63, PN 100, PN 160, PN 250, PN 320, PN 400.

• Surface: Black, Golden Yellow, Cold Galvanized, HDG.

Anti-Rust Oil

• Highlight: En1092-1 Forged Steel Flange,

BS4504 Forged Steel Flange,

BSPT screw flange

Product Description

DIN BS4504 EN1092-1 UNI SCREW FLANGE WITH NPT BSPT

BS 4504 Flanges Section 3.1 : 1989 is a Circular Flanges that is made to be used in combination with either Fittings, Pipes or Valves

The BS 4504 Flange is to be PN Designated as per the Specification for Steel Flanges. British metric standard BS4504 is now obsolete

and replaced by EN1092-1 edition 09-2008 for steel flanges which also incorporates DIN standard. Flange drillings in EN1092-1 are

generally the same as BS4504 and DIN 2501 but EN1092-1 covers a wider range. BS4504 Screw threaded flanges can be with pressure

PN16. PN25, PN40, Max. size is 24", Pressure PN63/64, PN100 with Max. size6"

Surface

Oil Black Paint, varnish, Golden yellow paint, anti-rust oil, galvanizing, Cold and Hot Dip Galvanized etc, Zinc plating. chrome plating. Black treatment, anodize, powder coating. punishment, brass plating. etc.

Features /Characteristics

- •Carbon steel flanges shall not be used in services above 425 °C
- •High-temperature service: Standard carbon steel material shall be ASTM A 105, a material that can be safely used for temperatures between minus 29 °C and 425 °C.
- •Low-temperature Service: Carbon steel flanges used for services below minus 29 °C, shall conform to the impact-testing requirements of ASME B 31.3.
- •ASTM A 350-LF2 shall be the standard material for low temperature applications
- •High-Yield Service: High strength carbon steel flanges ASTM A694 should fit API Std. 5L pipe Grade X42 to X65.
- •Material for low-alloy steel flanges (11/4 Cr-1/2 Mo) shall be ASTM A 182-F11. Material for intermediate alloy steel flanges (11/2 Cr-5 Mo) shall be ASTM A 182-F5.

Technology/ How to use and install the different flange types

WELDING NECK FLANGES

They are connected to the pipe by means of a Butt weld connection. They are used when X-ray testing is required or if the torque over unions are maximum. Its long tapered neck optimizes the stress distribution.

SLIP-ON FLANGES

This kind of flanges are installed with two weld bead, sliding the pipe inside. Thus installation costs are lower, so less accuracy is required for pipe cutting.

THREADED FLANGES

They are usually installed with the pipe previously threaded, in places where welding cannot be done. We do not recommend to install if there are high pressure variations in the system

LAP JOINT FLANGES

They slide on an overlapped gasket. They are commonly used where it is necessary to dismantle in order to be cleaned or repaired. Dismantling cost decreases due to the ease of flange turning and drilling alignment.

SOCKET WELD FLANGES

This kind of flange is especially designed for lower small diameters and high pressures. The pipe is inserted into the flange up to the seat and then is fillet welded against the cube.

BLIND FLANGESBlind flanges are utilized for pipe ends, and they bolted to any of the above flange types.

Production Process

Flanged Standard

ASME B16.5

This is the most used flange standard worldwide. The standard includes forged, cast and laminated flanges. It covers service, materials, dimensions, tolerances, marking and testing for flanges. It also describes all flange types for size 1/2"to 24"Class 150#, 300#, 400#, 600#, 900# & 1500#, and 1/2"to 12"Class 2500#.

ASME B16.36

This standard is applicable to flanges for flow measurement with orifice plate.
ASME B16.36 flanges have the same dimensions as B16.5 flanges except for the minimum thickness that is increased to allow measurement orifices.

Moreover, two slots and bolts allow flange separation and the replacement of the measurement plate. It covers sizes from 1"to 24"Class 300# to 1500#, and sizes 1"to 12"Class 2500#.

MSS SP-44

An standardization used for thin thicknesses and high strength. It covers ranges from 12"to 60"Class 150# to 600# and up to 48"Class 900# only for blind and welding neck flanges. Outside diameter and drilling template matches with ASME up to 36. Therefore, they can be used with valves and pumps according to ASME.

ASME B16.47

This standard covers the previous one complementing it with materials, pressure ratings and temperatures from ASME B16.5. A type class is similar to MSS-SP44. B type is the same as API 605.

ASME B16.20

It includes materials, dimensions and marking of rings for steel flanges 1/2 to 24"Class 150# to 1500#, and 36"Class 900#.

API 6 A

API 6 A specification has been created for wellheads and Christmas trees. It includes the standardization of lap joint flanges, which are dimensionally replaceable with ASME B16.5 ones but adding some tolerances with all sizes. However, as API materials are more resistant, the maximum service pressure of API/ASME union is limited to that of lower performance flange.

EN1092-1

This European Standard for a single series of flanges specifies requirements for circular steel

flanges in PN designations PN 2,5 to PN 400 and nominal sizes from DN 10 to DN 4000.

This European Standard specifies the flange types and their facings, dimensions, tolerances, threading, bolt sizes, flange jointing face surface finish, marking, materials, pressure/temperature ratings and approximate flange masses.

For the purpose of this European Standard, "flanges" include also lapped ends and collars. This European Standard applies to flanges manufactured in accordance with the methods described in Table 1. Non-gasketed pipe joints are outside the scope of this European Standard.

Application/Usage

A flange is a method of connecting pipes, valves, pumps, and other equipment to form a piping system to convey the water, steam, air, gas and oil. It also provides easy access for cleaning, inspection, or modification.
